

CONSTITUTION OF

CODING COUNCIL

PURPOSE OF EXISTENCE

The reason we exist lies in the core problem of the Faculty of Engineering and Technology, Jamia Millia Islamia. Our FET doesn't have any coding culture, which becomes a downside when we compare it with even the NITs or IIITs. What problem does this create? Without a coding culture, there is no competitive environment in the air of JMI, New Delhi, which directly reflects in the placements every year. Some new initiatives are required to fix this.

So, what role can Coding Council play in solving this problem? We will be hosting some events, including recurring events. These events may take place online or offline based on requirements. The events will mainly focus on enabling students to contribute to the vision of a competitive coding environment at Jamia Millia Islamia.

Coding Council is currently catering to students of the '29 batch and onwards only. The reason is simple—we do not yet possess sufficient strength to cater to earlier batches, as they may be more knowledgeable in the particular field than us. However, we surely look forward to opening it for all in the near future as the team grows substantially. We are still consolidating the founding team.

Coding Council intends to function as a foundational platform rather than an exclusive body, focusing on gradual and sustainable growth.

The following pages will include information about these events followed by the responsibilities of the currently defined roles (later).

CODEX MEETS

We have been running Codex meetups since mid October and we have successfully ran it 2 times.

CodeX, which was open for only Data Science student in its initial phase will now be an integral part of Coding Council.

The workflow of conducting this offline event is accomplished in some steps -

- Deciding the Date and Time - The Date mainly depends on the routine of first year sections. We tend to choose the date when most of the sections are free at the same time. The timing also coincides with the time when most of the sections are free that Day, So as to cater most of the students.
- Promotion of Event - Earlier, we did not promote this Event too intensively but as an established body... We need to take care of this aspect. The Graphics Team will make posters for it along with a link of group which we are going to make soon.
 - The posters will be circulated in the following groups -
 - Jamia B.Tech (unofficial) 2k25
 - Jamia B.Tech (Boys Only)
 - Every Section-Special Group of 29'
 - Computer & DS Branch Group of 29'
 - The new group we are going to form
- Execution on the Day - The Event usually starts with discussion of the already provided topics to participants which takes almost half an hour, then we move on to a quiz with chocolate problems related to the same given topic for which we already have a site created - <https://codexmeetup.netlify.app> where we have admin panel to create an event and a user dashboard to attempt the quiz.

Concluding The Event - The event ends as we distribute the prizes (currently chocolates) to top performers in the event with some photos with the winners.

Expected to re occur every month

ONLINE EVENTS

Online Events do not follow a fixed structure, we will plan every single of them accordingly.

PYTHON BOOTCAMP - WINTER EDITION 2026

We have been running this online event which is in collaboration with Piper Club and W3B - AI and Blockchain Society.

The Workflow for such Events being followed is as follows -

- Planning and Announcement - We plan what are the main learnings or profits of the event and then we need to make a poster along with a text emphasizing on the gains they will get after this bootcamp and then circulate the poster in the following groups -
 - Jamia B.Tech (unofficial) 2k25
 - Jamia B.Tech (Boys Only)
 - Every Section-Special Group of 29'
 - Computer & DS Branch Group of 29'
 - The new group we are going to form
- Forming an Event Specific Group - We will then form a new group with all the interested individuals and act on the posted announcement.
- Collaboration & Certifications - To make this more valuable, we may optionally provide them with e-certificates or the hard copies while collaborating with established tech societies of Jamia Millia Islamia to make the certificate more credible.
- Some Target Societies -
 - W3B - AI and Blockchain Society
 - IEEE
 - GDSC
 - Piper Club
 - ASME/SAE, etc

Ending - The Current Python Bootcamp Winter Edition 2026 will end on 14th January 2026.
